Elderly care

Learning outcomes

- Participants will learn about the physical, psychological and social changes that take place in old age and age-related clinical diagnoses

- Participants will learn how to care for the elderly depending on the degree of need for care; support in their lifestyle, care of people in complete need
- Participants will learn how the care process is planned and documented
- Participants will take part in the treatment and rehabilitation of sick and elderly people with disabilities, including the implementation of medical prescriptions
- Participants will learn about problematic situations that are typical of the profession like caring as a professional activity in the private sphere of strangers, dealing with mentally disturbed elderly people, what role family relationships and social bonds can play
- Participants will learn how to mediate with a difficult patient and how to help them with their emotions
