

Vitalis GMBH

Mechatronics

Internship

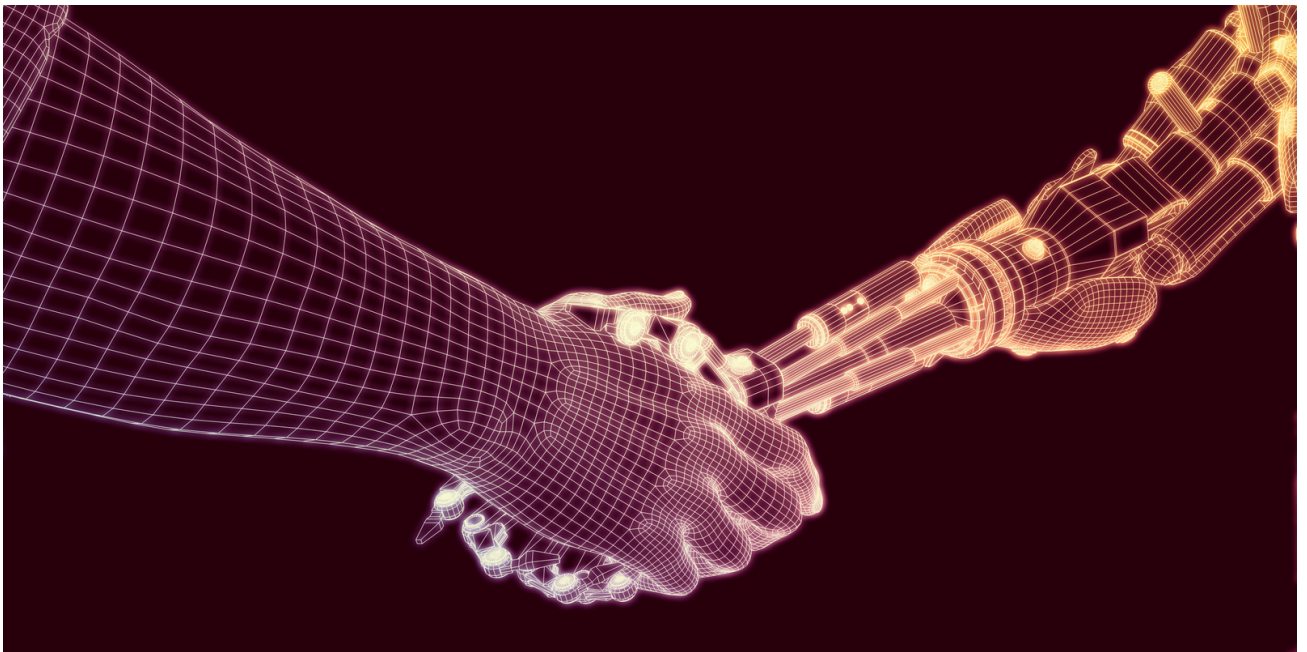

For students learning:

Electronics

Mechatronics

Electrics

IT

Learning outcomes

- Participants will learn to select tools and measuring instruments, taking into account the accuracy of machining of workpieces, use tools and measuring instruments for manual processing
- Participants will learn soldering of electronic parts and perform work in the field of manual and mechanical processing
- Participants will learn how to perform the wiring of various components according to technical diagrams
- Participants will learn how to write technical documentation of machines and equipment, define settings and parameters for the task
- Participants will learn how to carry out quality checks on the work performed, perform tool maintenance
- Participants will learn to disassemble equipment according to the technical documentation
- Participants will learn how to use PLC software and to program such
