

Vitalis GMBH

Electrics

Internship

For students learning:

Electrics

Electronics

Mechatronics

IT

Learning outcomes

- Participants will learn how circuits and protective measures are defined
- Participants will learn how to assemble modular units, enclosures and switchgear assemblies
- Participants will learn how to find faults and repair them accordingly to the original schematic
- Participants will learn how to adjust, adapt and commission assemblies
- Participants will learn how devices are repaired
- Participants will learn how power, communication and high frequency lines and cables are selected and laid
- Participants will learn how to digitally document installation
- Participants will learn what needs to be considered when installing lighting and compensation systems
