

Vitalis GMBH

PLC

Programming

Internship

For students learning:

IT

Mechatronics

Electronics - Electrics

Automation

Learning outcomes

- Participants will learn how to select tools and measuring instruments, taking into account the accuracy of machining of workpieces
- Participants will learn how to use tools and measuring instruments for manual processing
- Participants will learn to perform soldering of electronic parts
- Participants will learn to perform work in the field of manual and mechanical processing
- Participants will learn to use technical documentation of machines and equipment
- Participants will learn to carry out quality checks on the work performed
- Participants will learn to define the most important settings and parameters for the task
- Participants will learn to plan the dismantle equipment according to the technical documentation
- Participants will learn to perform tool maintenance
- Participants will learn to use SPS software layout
- Participants will learn to perform the wiring of various components according to technical diagrams
