

Vitalis GMBH

E-Buggy

Internship

For students learning:

Mechanics

Mechatronics

Metalwork

Learning outcomes

- Participants will learn how to read technical drawings and tables, make simple sketches and transfer measurements to the workpieces
- Participants will learn what the basic terms of standardisation are
- Participants will learn how to operate testing and measuring tools
- Participants will learn how to operate and monitor machine tools, maintain and care for machines, equipment and tools
- Participants will learn how to select machine tools according to workpiece requirements and the manufacturing processes
- Participants will learn how to define and set production parameters in relation to the workpiece and material
- Participants will learn how to test and prepare, assemble and disassemble components and assemblies in compliance with their function, according to technical documents for assembly and disassembly
