

Vitalis GMBH

Metalworks

Internship

For students learning:

Metalworks

Welding

Mechanics

Learning outcomes

- Participants will learn what the most important metal materials are called and what characteristics they have
- Participants will learn what basic manual metalworking techniques are available, e.g. chipping, sawing, filing or bending
- Participants will learn which mechanical metalworking techniques are available, e.g. drilling, milling, grinding or turning
- Participants will learn how to read technical drawings and tables
- Participants will learn how to make simple sketches, how to transfer measurements to the workpieces and how to correct sketches
- Participants will learn how to select machine tools according to workpiece requirements
- Participants will learn how to weld and use different welding techniques
